## AUTOMATED CONDIMENT DISPENSING SYSTEM

Al H. Marquez

ABSTRACT

An automated system for dispensing condiment packets includes a magazine for storing a stack of condiment packets and a dispenser for metering out those condiment packets. Multiple magazines and dispensers can be combined in a single condiment delivery assembly, thereby providing the means for dispensing a variety of condiment flavors. The delivery assembly can be incorporated into a fast food vending machine or can be designed as a standalone unit.
